

Blue Prism v6.6

Automate **Together**. Automate **Better**. Automate **More**.

V6.6 puts connected-RPA into everyone's hands! V6.6 elevates the Blue Prism platform to the next level with a variety of new features that address more users, with more security and more flexibility with their data.

Overview

Blue Prism delivers new and powerful tools that make data easier to control and manage. Enhanced functionality in the *Data Gateways* feature is enabling you to do more with the vast data that is created by your Digital Workforce. Through a simple, guided interface your process data can be centrally managed and securely sent to digital outlets giving you more control and value in the data that is flowing through your organization.

Additionally, V6.6 is addressing the requirements of the US government by ensuring *FIPS (Federal Information Processing Standards) compliance*. This increased security along with the availability of Blue Prism as a FedRAMP compliant cloud service on Azure, makes it the ideal solution for government agencies.

All non-FIPS compliant functions in the code have been updated. When launched, Blue Prism will read

the local policy to determine if FIPS compliance is enforced

With v6.6, users can now try Blue Prism for free through a simplified end user experience while trialing a fully featured and robust connected-RPA solution. Both deployment options of these trials (on-premises and cloud) are enterprise grade and have the same level of security that Blue Prism is known for.

In order to make the Blue Prism experience easier and faster, v6.6 includes a new installer specifically for on-premises trials. A database setup wizard and simplified licensing along with a Getting Started Tour make the first-time user experience easier than ever. Sign up for a free 30-day trial by visiting the [Blue Prism Get Started page](#).

Try, learn or buy

Getting started with Blue Prism is now easier than ever! Regardless of your experience with RPA you can try Blue Prism for free with only a few clicks. Create a proof of concept with your digital workforce, experience Blue Prism in the Cloud, or level up your automation skills with the most secure and feature-rich Robotic Process Automation platform.

Try

Blue Prism free trials, with two options available - in the cloud or on your local computer - are easy to access and quick to deploy.

License	Free*
Duration	Up to 30 days
Digital workers	1
Processes	10
Production environment	Yes

Learn

Need to RPA? Or are you a developer wanting to learn more? Easily level up your automation skills with the free, locally installed edition of Blue Prism.

License	Free
Duration	90 days
Digital workers	1
Processes	5
Production environment	Yes

Buy

Experience the power of automation, combined with robust security, AI and cognitive technologies, all locally installed.

License	Unlimited
Duration	Unlimited
Digital workers	Unlimited
Processes	Unlimited
Production environment	Yes

Features and Benefits

V6.6 delivers strong technical improvements in critical areas of Database management and Archiving. Additionally, this release builds on the data gathering and exporting features introduced in v6.5 as well as expanding security measures to meet FIPS compliance needs.

FIPS Compliance for Increased Security:

To allow our product to be used by organizations that require or want to deploy according to FIPS standards, we updated Blue Prism to work in an environment that enforces FIPS compliance.

FIPS are a set of standards that describe document processing, encryption algorithms and other information technology standards for use within non-military government agencies and by government contractors and vendors who work with US state and government agencies. FIPS defines specific methods for generating encryption keys.

- All non-FIPS compliant functions in the code have been removed.
- Users will be notified upon signing on if they have any non-compliant encryption schemes.
- Non-compliant algorithms will be disabled when creating new encryption schemes.

Blue Prism Trial Installers: In order to make the Blue Prism experience easier and faster, v6.6 includes a new installer specifically for on-prem trials and for the new Learning Edition (coming soon). A database setup wizard and simplified licensing along with a Getting Started Tour make the first-time user experience easier than ever.

Data Gateways Enhancements allow for more data flexibility: With v6.6 customers can more easily manage how much data they generate with Blue Prism and how to best maintain the data.

- **Data Gateways Reattempt** – When Data Gateways is unable to send data to an end point, this is recorded in a file on disk to be resent at a later time. This ensures that data is retained in the event of an end point becoming unexpectedly unavailable.

- **Send Work Queue Analysis Snapshots** - Allows users to send their collected work queue snapshot data to external end points alongside session logs, published

dashboards and custom object data. This feature Increases the amount of data that can be sent out of Blue Prism to be used in external reporting tools and/or data storage systems.

- Database Maintenance and Archiving

Improvements: The mechanism that transfers data between server and client has been changed to split large data packets, resulting in improved efficiency. The improvements made in these areas will reduce the amount of information stored within the Blue Prism database and will allow users to maintain their databases more effectively.

Visit the [Blue Prism customer portal](#) to download version 6.6. Visit the [Digital Exchange](#) to access Blue Prism's Free Trials and to leverage all the business benefits this release offers:

	Knowledge & Insight - The ability to harvest, understand & deliver insights from disparate data sources.
	Learning - The ability to adapt to evolving process patterns & derive contextual meaning.
	Visual Perception - The ability to read, understand & contextualize visual information.
	Problem Solving - The ability to solve logic, business, and system problems autonomously.
	Collaboration - The ability to work seamlessly alongside people & systems.
	Planning & Sequencing - The ability to optimize workloads & discover opportunities for better outcomes.

The Blue Prism Digital Exchange enables business users to very quickly create new industry- and process-specific expansions of the Blue Prism platform.
