

# FortressIQ Gives Blue Prism Customers AI-Powered Business Process Discovery for Data-Driven Automation

Together, FortressIQ and Blue Prism deliver scalable automation by streamlining business process discovery, process documentation, and RPA deployment. The ability to drill down to the sub-task details of processes across the enterprise is essential for determining which Blue Prism intelligent automation solution would be most effective and where. Organizations can easily obtain details on their current state operations, automatically pinpoint the most optimal areas for RPA, and quickly execute on automation initiatives.

## Automated Business Process Discovery and Documentation

For automation projects to succeed, companies need a complete and detailed understanding of the processes and tasks they want to automate before implementing RPA. Typically, one-third of the time allocated for automation is spent on documenting processes and reviewing them for automation potential; this creates an upfront bottleneck and lengthens timelines. The sooner organizations can get processes automated, the sooner they can assign those tasks to digital workers and start recognizing ROI from their automation initiatives.

Implementing automation at enterprise scale is crucial for companies' short-term and long-term success. Completing thorough process discovery, curating accurate data and insights, and producing detailed documentation, however, remains a challenge. Without streamlining these areas, RPA licenses will sit unused and automation ROI suffers.

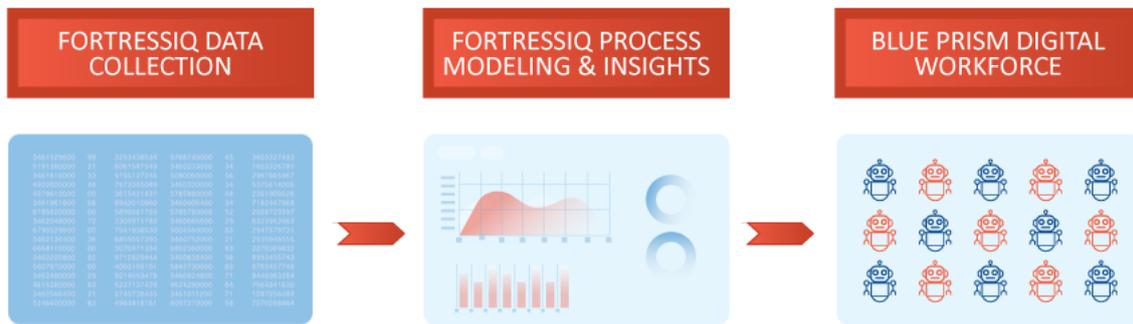

FortressIQ bypasses the need to engage in manual, intrusive, expensive, and error-prone business process assessments that slow down RPA deployments and inhibit the ability of companies to achieve automation at scale and increase ROI.

## How it works

FortressIQ delivers the first AI-driven business process intelligence platform to automatically discover, map, model, and document all the process and tasks executed across every application by an organization's workforce. Combining computer vision, natural language processing, and machine learning our enterprise solution can produce unique insights that cannot be uncovered with other methods – and auto-generate level 5 process definition documents (PDDs) without requiring system integrations or access to log files. These detailed data points can help identify areas for RPA, produce a PDD, and kick-off the modelling of a Blue Prism Process, allowing an organization to create a roadmap for scalable, successful automation. Using automated process discovery can streamline Blue Prism RPA implementation up to 90%.

Blue Prism customers using FortressIQ can easily create an automation roadmap that streamlines and enables rapid RPA deployment at scale in as little as a few weeks.

As the pioneer of the most robust, secure, and highly scalable Digital Workforce, Blue Prism's focus is on delivering an agile workforce that follows rules-based business processes and interacts with systems in the same way human users do – and that complements both traditional and leading edge IT solutions such as business process management (BPM), OCR, AI, machine learning, and front- and back-office productivity tools.

## FortressIQ & Blue Prism: Automate Your Enterprise

Together, FortressIQ and Blue Prism provide the following customer benefits:

- Save significant time & money – up to a 90% reduction when compared to traditional process discovery and modelling methods
- Digitally discover and document any process without log files or integrations
- Streamline digital worker coding with automatic generation of level 5 process definition documents (PDDs)
- Produce an achievable, scalable automation roadmap in weeks with accurate, data-driven insights and a complete view of targeted lines of business
- Increase RPA adoption and usage across departments
- Minimize impact and disruption to your workforce

### Summary

FortressIQ helps accelerate and scale Blue Prism customers' RPA goals through automatic detection of tasks and processes, and mapping those processes and tasks identified as prime automation candidates to a detailed, level 5 process definition document (PDD), which then seamlessly align to Blue Prism's intelligent automation solutions. This level of detail allows customers to make data-driven decisions that will maximize ROI. Working seamlessly, FortressIQ and Blue Prism put customers in the driver's seat by enabling them to streamline their Blue Prism implementations up to 90% faster than traditional methods, saving both time and money.

### About Blue Prism

Blue Prism's vision is to provide a Digital Workforce for Every Enterprise. The company's purpose is to unleash the collaborative potential of humans, operating in harmony with a Digital Workforce, so every enterprise can exceed their business goals and drive meaningful growth, with unmatched speed and agility. Fortune 500 and Public-Sector organizations, among enterprise customers operating in nearly 70 countries and across 70 commercial sectors, trust Blue Prism's enterprise-grade connected-RPA platform. For more information, visit [www.blueprism.com](http://www.blueprism.com)

### About FortressIQ

FortressIQ is an enterprise platform that powers and accelerates digital transformation with data-driven metrics on current state operations. Using AI we learn how a business functions through live activity analysis. By radically lowering the cost, effort and time to document and model processes, customers quickly gain the insights necessary to implement automation and improve business operations. It requires no integration or APIs, works across all applications, and delivers value in weeks. For more information on FortressIQ, please [contact Jay Sivachelvan](#), VP of Global Partnerships, or visit us online at: <http://www.fortressiq.com/>.
