

Forms InMotion Output Translator – Integration Between FiM and Blue Prism’s RPA Solution

ABOUT

KeyMark’s Forms InMotion Output Translator

KeyMark is an intelligent automation provider that helps clients leverage technology to boost productivity and reduce manual labor. The Forms InMotion Output Translator is an asset that translates output from FiM for use in downstream processes or applications.

CHALLENGE

In today’s connected world, organizations need to centralize all of their forms with form automation software, making them accessible on any device at any time, so that important information stays moving and isn’t missed. Then, forms need to be connected to an organization’s most important data sources for accessibility and accuracy.

SOLUTION

KeyMark’s Forms InMotion solution -- a smart and scalable form automation software -- paired with Blue Prism RPA helps you fast track your data into your downstream processes or applications.

BENEFITS

- Form automation
- Centralized form entry
- Scalable
- Increased productivity
- Cloud based administration
- Mobile friendly
- Easy integration
- Secure data access

USE CASE

Example: Extend Employee Onboarding Automation

Employees – they’re the life-blood of your enterprise. Adding new members to your team can be a time-consuming – and often frustrating – process for employees and administrators. Each new hire means new paperwork. And lots of it. Forms InMotion streamlines the onboarding process by allowing you to create form packages and bundle all relevant new hire paperwork together.

However, what happens when this information needs to go into a system that is missing newer technologies such as an API? Blue Prism can step in -- and with the Forms InMotion Output Translator -- prepare this data to be automated into a downstream system and thereby extend your automation of a once un-automatable process.

ENTERPRISE BENEFITS

- Manage all of your forms through cloud-based administration
- Enhance efficiency with Form-to-Form Autofill
- Access data in real-time and increase visibility into processes
- Use your existing PDF or HTML files or use Forms InMotion's built-in forms creator
- Push data to your integrated line-of-business systems

HOW IT WORKS

Simply create a form package in Forms InMotion, have the end user fill out the form, utilize the output translator to collect the data, and then use Blue Prism to take this information for ingestion into another application or process.

SUMMARY

KeyMark's Forms InMotion Output Translator has integrated Forms InMotion with Blue Prism to bring an enhanced form automation experience to its customers. This asset helps fast-track information into downstream processes and lends itself to an overall faster and easier data process. It can:

- Extend form automations
- Easily output data to multiple systems
- Add additional workflow through Blue Prism
- Expand the security provided by Forms InMotion with Blue Prism
