

## Blue Prism v6.7

### The Digital Workforce for every Enterprise

Blue Prism v6.7 delivers greater **ease of use, increased security and deployment flexibility**. An improved user experience with the inclusion of a Digital Exchange (DX) Tab directly on the platform makes true connected-RPA more accessible. Greater globalization is possible with the introduction of Blue Prism in French. And best in class security with enhanced server encryption and more, makes Blue Prism v6.7 the Digital Workforce for every Enterprise.

### Overview

Blue Prism v6.7 is all about empowering enterprise users with more features and functionality and greater security in order to get the most out of their Blue Prism connected-RPA solution, while unleashing human potential.

### Ease of Use

**1. Link to the Digital Exchange:** Further integrating the Blue Prism platform and the Digital Exchange, which contains the intelligent skills that empower the Blue Prism Digital Workforce. Users can now launch the DX directly from the main application window. This launches the user's default browser and opens the Digital Exchange. With this direct integration of the DX users now have easier access to a robust ecosystem of AI and cognitive skills that enhance Blue Prism automations.

Releases and Skills downloaded from the DX will now be more easily importable into the product. If a user double clicks a release or a Skill after upgrading to 6.7 then this will either:

- 1) Be automatically imported into Blue Prism, should the user already have it running.
- 2) Launch Blue Prism ready for import, if not already open.

### 2. Studio navigation tree performance optimizations:

Several performance enhancements have been applied to the tree view in the Studio and Control Room to improve the usability of this control at scale.

**3. Product Localization/Translation:** 6.7 will see the product translated into French to continue our program of improvements intended to facilitate global deployments of Blue Prism. Users will now be

presented with French as an option in the “Change language” menu when signing into Blue Prism. By making Blue Prism available in multiple languages we continue to increase the adoption of RPA and make it easier for users around the world to interact with the product.

**4. Online product help:** The product help has been updated and is now provided online and is available in multiple languages. All of the in-product links to help have been updated to this new online resource. This new feature makes product help more accessible and provides a broader suite of information. Additionally, the help files can be configured for local or offline deployment where needed.

## Increased Security Features:

**1. Enhanced Server Encryption:** As part of providing a product built with security in mind, we have made improvements to the way customers can secure their environments, specifically their application server configuration files. Blue Prism 6.7 now provides the ability to apply certificate-based encryption to server config files.

This feature gives users the ability to apply stronger levels of security which they can update more frequently, providing greater protection of potentially sensitive information and allowing Blue Prism to follow internal security policies more easily.

## Deployment Flexibility features:

**1. Improved dashboard & charting capabilities:** Clearer, more intuitive, and interactive dashboards and charts are now available as part of v6.7. Customers can now create line charts as well as bar, column, pie and gauge charts. This enhancement increases the functionality of the home page dashboard, provides a more modern look and feel to the product.

**2. New Product Installer:** 6.7 sees the main Blue Prism installer updated to improve accessibility and make the install and upgrade process easier.

**3. Upgrade Trial/Learning installations:** Existing installations of Blue Prism Trial/Learning edition will be upgraded automatically the first time the product is launched after the install of a later version of Blue Prism Trial/Learning edition. As new versions of the product are released there is now a built-in capacity for the product to upgrade itself on launch after installation of the new version. This means anyone currently using a Trial/Learning version of 6.6 can upgrade to the latest version easily and without disruption.

**The Blue Prism Digital Exchange enables business users to very quickly create new industry- and process-specific expansions of the Blue Prism platform.**

**Visit the Blue Prism customer portal to download version 6.7 and access the Digital Exchange directly from your Blue Prism instance.**

	<b>Knowledge &amp; Insight</b> - The ability to harvest, understand & deliver insights from disparate data sources.
	<b>Learning</b> - The ability to adapt to evolving process patterns & derive contextual meaning.
	<b>Visual Perception</b> - The ability to read, understand & contextualize visual information.
	<b>Problem Solving</b> - The ability to solve logic, business, and system problems autonomously.
	<b>Collaboration</b> - The ability to work seamlessly alongside people & systems.
	<b>Planning &amp; Sequencing</b> - The ability to optimize workloads & discover opportunities for better outcomes.
