

# Technical Infrastructure Assessment

The best way to ensure the intelligent automation tech-stack and environment is in tip-top shape for high performance.

The Technical Infrastructure Assessment is an evaluation of the existing infrastructure, technical components, and system environments so you build a stable, operable, and scalable backbone for intelligent automation.

## What is Technical Infrastructure Assessment?

Our Technical Infrastructure Assessment starts with our experts analyzing the architecture design and governance documents you provide. With an eye on scalability, high availability, disaster recovery and operational excellence, we measure the health of your systems against best practice benchmarks to identify any vulnerabilities.

## Why Choose Technical Infrastructure Assessment?

With the Technical Infrastructure Assessment, an in-depth review of your definition documents, an in-person working session delves even further into the hardware, operating systems, virtualization, and security. This comprehensive approach is the only way to ensure success today and tomorrow as your program grows.

## What to expect:

- In-depth review of the Architecture Design and Governance Documents.
- In-person workshop to analyze hardware, operating systems, configuration, virtualization setup and security protocols.
- Recommended approaches based on benchmarks developed across hundreds of customer's environments.

## VALUE AND OUTCOMES:

- Health rating on the infrastructure based on best practice benchmarks.
- Recommendations to improve stability and operational performance.
- Identification of areas for upskilling technical resources
- Guidance to ensure your environment is resilient, highly available with appropriate DR strategies in place.
- In-person review session to strategize next steps based on the Assessment Report and Recommendations.
